

WEBSITE IDEA

IDEATION DOCUMENT

BELONGS TO:

Iulia Toderascu

PURPOSE:

Individual Project semester 2

CLASS S2-CB03

WEBSITE DESCRIPTION

THE MAIN IDEA

Have you ever had trouble finding the right gift for someone? Or were you just bored by the similarity of the products on the market? Well, my website is going to be the right place for small business owners that sell unique products and customers who want to purchase something special.

HOW WILL IT WORK?

My website will have 3 types of users with different permissions.

1. the small **business owners** can create their accounts and send their products to the admin in order for them to be posted on the website
2. **customers** can view and buy products
3. the **admin** can delete accounts, add/ delete products

GOALS & OBJECTIVES

01

Build a user-friendly interface with a proper design

03

Display the products in an efficient way

02

Manage the accounts in a logical way

04

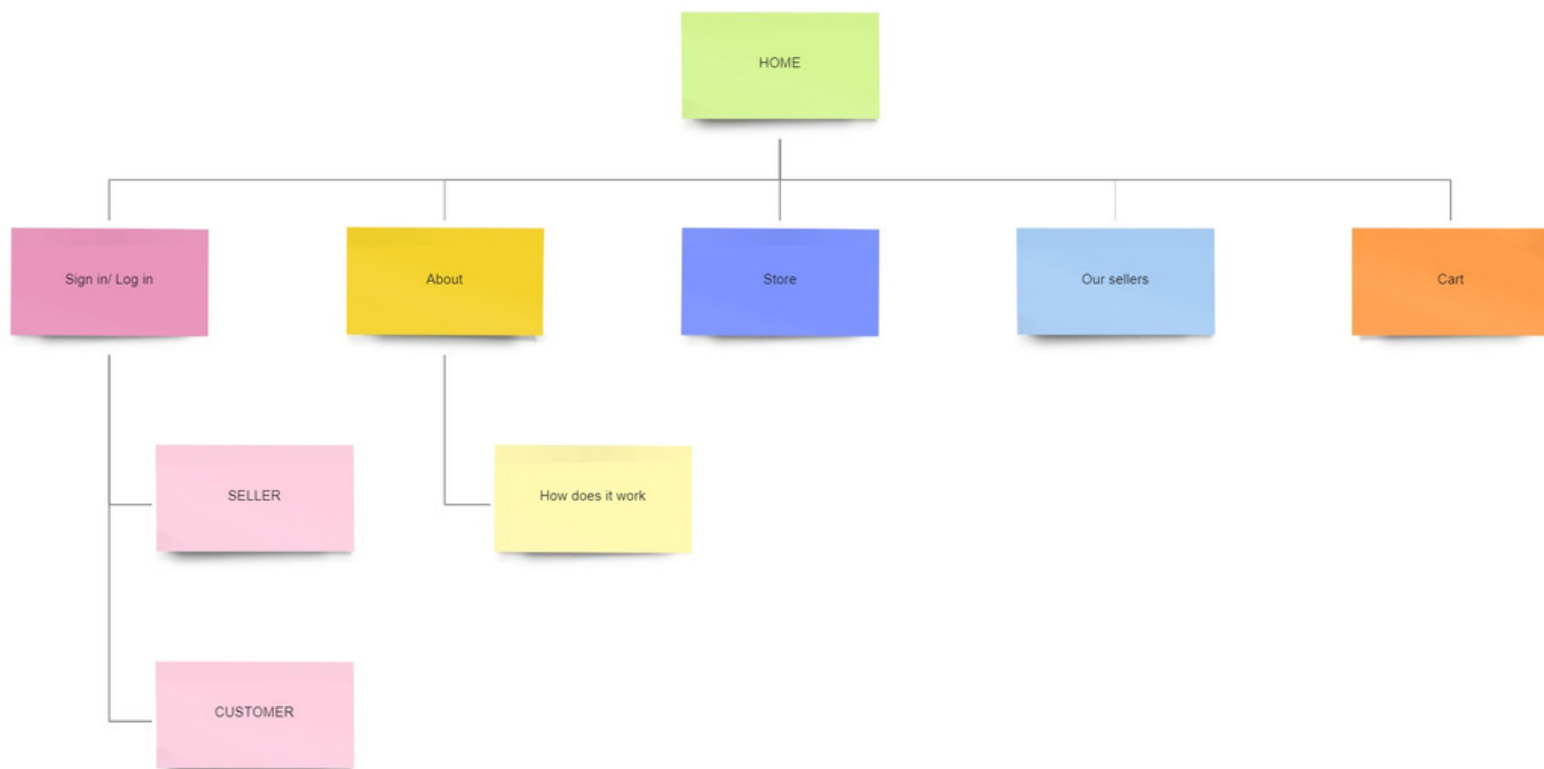

Emphasize with each business identity (create a "page" for each business owner)

TIMEFRAME

- Website plan evaluation
- Implementation Plan
- Wireframing and UML
- Build & System Test
- Add advanced functionalities
- Final Project Implementation
- Second Release (Improvements based on your feedback)
- Project Maintenance

SITEMAP

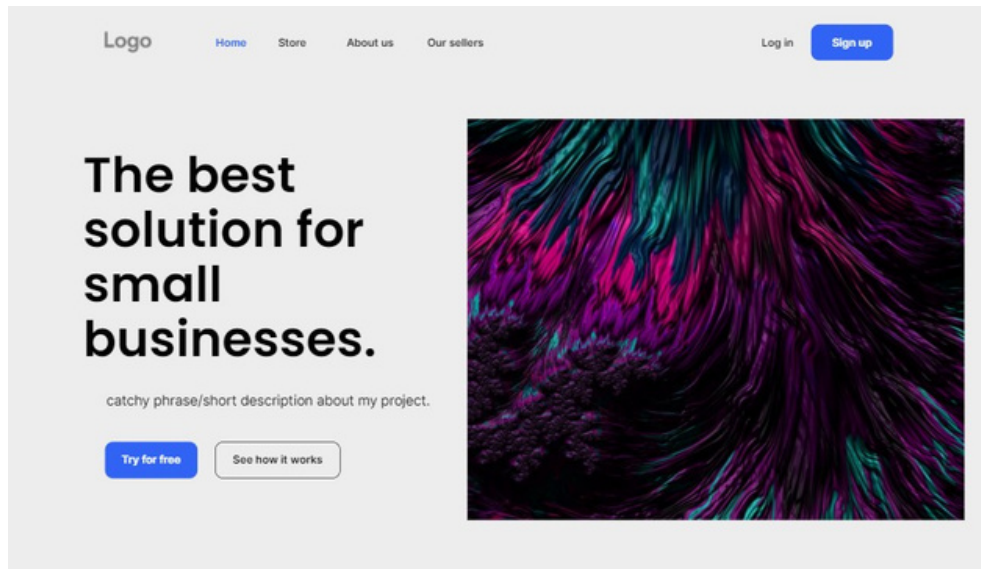

The pages will follow this sitemap. I might add additional subfiles if necessary.

I came up with this website idea because of my priorities during this semester:

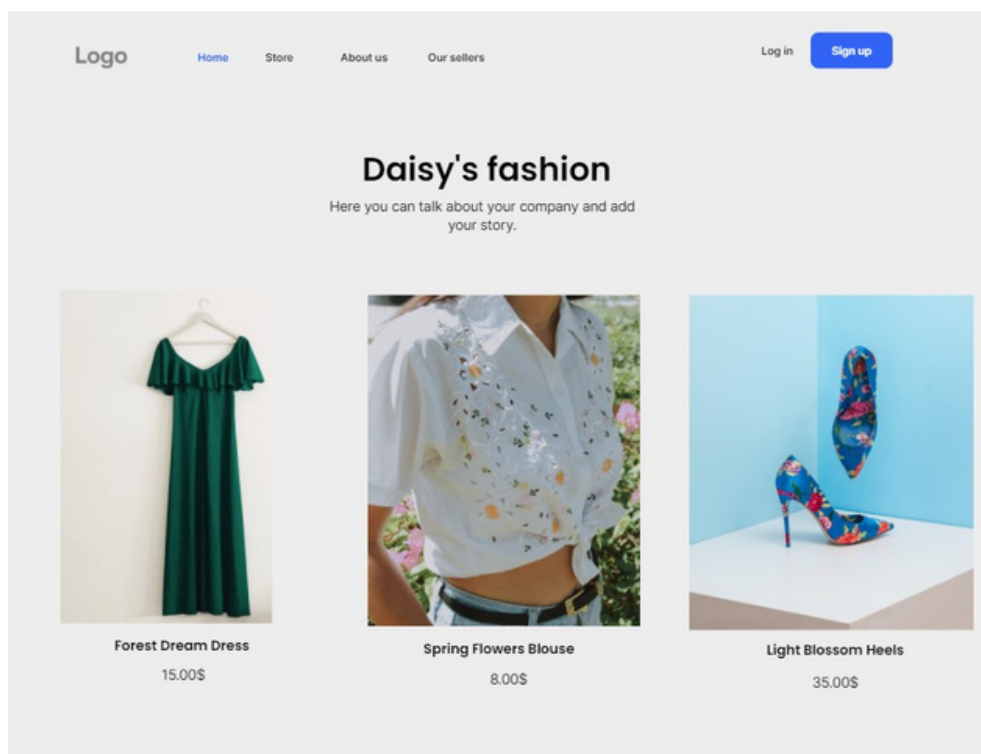

- implementing the knowledge that I acquire during lectures
- creating a professional code that is written in a proper manner
- building a friendly interface
- simulating a potential future project for a client or company

Until now I have an idea regarding the accounts: I will use base and subclasses with relevant methods. The design will be based on my knowledge from the previous semester but if I have the time I would like to implement something more complex like animations or effects.
